Webinar Housekeeping

- This “LIVE” session is being recorded and will be available on BrightTALK immediately after this session
- Q&A: Please type questions in the Questions Box below the presentation screen
- You can expand the presentation to full screen for optimized viewing by hovering over the screen showing the presenter’s slides
 - In the bottom right corner, click on the arrows that appear
 - This will take you to full screen view
 - To go back to the minimized screen, click the arrows again to submit questions, provide feedback, etc...
- Additional information is available to you behind the “Attachment” button and will also be on the Vivit website

Agenda

- Introduction to NNMi iSPI for Metrics
- Is your NPS server under performing?
- Tuning of different components of NPS
- Best practices
- Some troubleshooting.

Introduction

- Performance – real time charts and historical analysis
- Performance Components can reside on same server as NNM, or on a dedicated server
- Foundation of the performance components is the Network Performance Server (NPS)
- Many iSPs use NPS for reporting purposes
 - IPT
 - Multicast
 - MPLS
 - Quality Assurance
 - Metrics
 - Traffic

Is your NPS server under performing?

Do you see your reports taking time than usual?

Do you see many metric files getting stuck in nnmi shared folder?

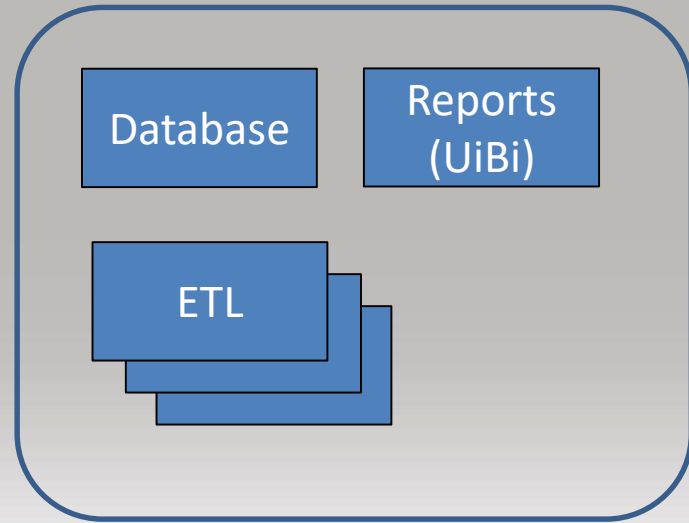

Do you see the server resource consumption on a high?

YOUR INDEPENDENT HPE SOFTWARE USER COMMUNITY

Do I need to scale up?

Am I meeting the support matrix?
Explore FSD.

YOUR INDEPENDENT HPE SOFTWARE USER COMMUNITY

Is your NPS server STILL under performing?

➤ ETL

How to find if ETL needs tuning?

- Backlog of metric files
 - Mar 24, 2016 12:24:39 AM [PID:44817] INFO
/opt/OV/NNMPerformanceSPI/bin/.etl-runtime.Interface_Health.ovpl[1474]
ETL.Interface_Health Found 1595 new metrics files for InterfaceMetrics, processing first batch of 4 files...
- Increase in input (records in metric and topo files, number of topo files)
 - Mar 24, 2016 12:25:21 AM [PID:44817] INFO
/opt/OV/NNMPerformanceSPI/bin/.etl-runtime.Interface_Health.ovpl[1877]
ETL.Interface_Health Forking 15 child preprocessors to process total of 2901862 records pending
- Missing ETL-Heartbeat
 - MainServiceLoop ETL process for ExtensionPack Interface_Health: Heartbeat last received 16 minutes ago (expected every 5 minutes). Process will be restarted 60 minutes after last heartbeat.

ETL Tuning

➤ **Tune the following ETL parameters :**

- ETL_MaxChildProcs
- ETL_MaxRecordsPerChild
- ETL_MaxMetricsFilesPerBatch
- ETL_SCDType2Disable
- PRSPI_ENABLE_BASELINE

ETL Tuning

NNMPerformanceSPI.cfg

```
# ETL Controls
ETL_MaxChildProcs      5
ETL_MaxRecordsPerChild 100000
ETL_MaxMetricsFilesPerBatch 1 # Increasing may improve backlog processing time, but will also increase ETL memory usage.
ETL_MaxAllowedTimeKeyRange 14 # Max allowed TimeRange for any batch of input data (in days)
ETL_TimeKeyRangeCheck 3650 # If set, ETL will reject records more than N days from system time (dflt 10 years)
ETL_SCDType2Disable 0 # Flag to disable ETL from Type2 Group Calculations. To disable, set to 1

PRSPI_HTTP_PORT 9300
PRSPI_HTTPS_PORT 9305
PRSPI_HTTPS_ENABLED FALSE

# Enable or disable baseline calculations. Turn off (comment out line) in very high load systems.
PRSPI_ENABLE_BASELINE 1
```

Is your NPS server **STILL** under performing?

DB

➤ How to find if DB needs tuning?

- Reports run for longer duration
- IQ_SYSTEM_TEMP errors
 - I. 09/07 19:16:44. 0000028590 Allocation failed. Dbspace IQ_SYSTEM_TEMP is OUT OF SPACEI. 09/07 19:16:44. 0000028590 Exception Thrown from slib/s_blockmap.cxx:4823, Err# 0, tid 540 origtid 540I. 09/07 19:16:44. 0000028590 O/S Err#: 0, ErrID: 2096 (s_nodbpaceexception); SQLCode: -1009170, SQLState: 'QSB66', Severity: 14I. 09/07 19:16:44. 0000028590 [20223]: You have run out of space in IQ_SYSTEM_TEMP DBSpace.

DB Tuning

- IQ parameters
 - lqtc, iqmc, iqlm
- DB usage
 - IQ_SYSTEM_TEMP, USER_MAIN

DB Tuning

Perfsapi.cfg

```
# note: you must restart IQ for this parameter to take effect
# also note that on RHEL6 systems the kernel setting for maximum number of threads is limited to 1024.
#

-iqmc 18738
-iqtc 56214
-iqlm 37476

# Logging
# Explicitly place server log and error log in NPS logs dir, limit to 512M with one old generation, add SQL and connection timing detail
-o "/var/opt/OV/NNMPerformanceSPI/logs/perfsapi.srv.log"
-oe "/var/opt/OV/NNMPerformanceSPI/logs/perfsapi.err.log"
-on 512m
-zr SQL
-zt
```

Is your NPS server STILL under performing?

UI

- How to find if UI needs tuning?
 - Reports fail to run with cognos errors
 - http-9300-55 caf 2047 1 Audit.dispatcher.caf Request Failure SecureErrorId: <date>-<time>.646-#44 Original Error: DPR-ERR-2002 Unable to execute the request because there were no connections to the process available within the configured time limit
 - ASE logs has specific errors

00:0002:00000:00010:2014/05/17 17:21:09.50 server There are not enough 'user connections' available to start a new process. Retry when there are fewer active users, or ask your System Administrator to reconfigure ASE with more user connections.

v i v i t

UI Tuning

- BI parameters
- ASE parameters

Property	Default	Suggested Value
Number of high affinity connections for the report service during non-peak period	2	10
Number of low affinity connections for the report service during non-peak period	8	10
Maximum number of processes for the report service during non-peak period	2	10
Number of high affinity connections for the report service during peak period	2	10
Number of low affinity connections for the report service during peak period	8	10
Maximum number of processes for the report service during peak period	2	10

Best Practices

- Size properly
- Number of extension packs
- Number of concurrent users
- Use case based reporting
- Number of schedules planned
- Ad-hoc reporting

YOUR INDEPENDENT HPE SOFTWARE USER COMMUNITY

Some Troubleshooting

➤ Different log files

- prspi.log - Contains all operational details of NPS.
- perfspi.srv.log - Contains all operational details of the Sybase IQ database used by NPS. This file can grow up to 512 MB.
- perfspi.iqmsg - Sybase IQ messages file. This file can grow up to 512 MB.
- dbproxy.log - Records all database queries triggered by NPS.
- perfspiUI.log - Log file created and updated by the Business Intelligence Server and content store.

Some Troubleshooting
