Combining Micro Focus LeanFT with your existing Selenium Test Automation

Vivit SIG Talk - Daniel Horn – September 11th 2018

Speaker

Daniel Horn

profi.com AG

Senior IT-Consultant

dhorn@proficom.de

Current market challenges

- Huge competition in Innovation & Releasement
- time to market becomes faster and faster
- Customer experience
 - Earlier Testing
 - More Testing
 - Faster Results in Testing
- Scalability (Cloud Services ...)
- Cross-Platform Capability (Chrome, Firefox, Edge, ...)

How can LeanFT help?

Key Features of LeanFT

- integrated in several IDE's and development-environments (IntelliJ, Eclipse, VisualStudio)
- Creation of tests based on established Unit-Frameworks and in known environments
- Creation of tests in modern languages (C#, Java, ...)
- Support of all major technologies as AUT¹

¹ Application under Test

LeanFT compared to Selenium

profi.com
we make IT work

	LeanFT	Selenium
Programming Language	Java, JavaScript, C#	Java, JavaScript, C#, Pearl, PHP, Python...
Operating Systems	MS Windows, Apple OS X, Linux	MS Windows, Apple OS X, Linux
Unit-Test-Frameworks	NUnit, MSTest, TestNG, JUnit, Jasmine, Mocha	NUnit, JUnit, TestNG, PyUnit, RSpec
Utilities	Object Identification Center Test Recorder LeanFT for Selenium Image Based Recognition	Selenium IDE (Record & Replay) Selenium Grid
Supported AUT	Web, Mobile, .NET, SAP, Java, Mainframe	Web (IE, Firefox, Safari, Opera, Chrome) Mobile (Appium)

What is LeanFT for Selenium

- Extends the usage of Selenium
 - Enhancement of the functionalities
 - Visible text, object-type, attributes, regular expressions
 - Combine different locators
 - Object Identification Center for Selenium-Tests
 - Identification of objects in the application from IDE
 - Validation of selected locator combination
 - Code Generator
- Available since LeanFT 14.00

Object Identification from the IDE

The screenshot shows the Selenium IDE interface with the Object Identification Center (OIC) open. The OIC window has a title bar 'OBJECT IDENTIFICATION CENTER [Selenium]'. It contains a tree view on the left, a list of locators in the middle, and a table of values on the right. Annotations with callout boxes point to various parts of the interface:

- Start Selenium Browser**: Points to the Selenium IDE icon in the top-left corner of the OIC window.
- Highlight/Validate Element Copy Code**: Points to the icons (highlight, validate, copy) in the top-right corner of the OIC window.
- Element XPath**: Points to the tree view on the left, which shows the DOM structure of the current page.
- Locator S**: Points to the 'id' locator in the list, which is selected and has a checkmark.
- Start Spying**: Points to the 'Start Spying' button (a magnifying glass icon) in the bottom-right corner of the OIC window.

The tree view on the left shows the following structure:

- https://www.google.com/?gw...
- <html>
- <body> gsr
- <div> viewport
- <div> main
- body
- <center>
- <div> lga
- hplogo

The list of locators in the middle shows the following properties:

- cssSelector: img#hplogo
- xpath: //*[@id='hplogo']
- index: 0
- attributes: Count = 9
- className
- id: hplogo (selected)
- name
- role
- styles: Count = 261
- tagName: img
- type
- visibleText

The table of values on the right shows the following data:

Locator	Value
cssSelector	img#hplogo
xpath	//*[@id='hplogo']
index	0
attributes	Count = 9
className	
id	hplogo
name	
role	
styles	Count = 261
tagName	img
type	
visibleText	

Enhanced Locator Functionality

- Chain elements to recreate the Website-Structure
- Combine multiple locators to identify one object

```
31  
32     driver.findElement(new ByChained(  
33         new ByEach(  
34             By.attribute("id", "body"),  
35             By.id("body")  
36         ),  
37         By.tagName("center"),  
38         new ByEach(  
39             By.id("hplogo"),  
40             By.name("")  
41         )  
42     ));  
43
```

Patterns for using LeanFT and Selenium

- Integration by simply installing LeanFT
 - Install and enable LeanFT on Dev-Devices
 - Import two libraries and you are ready to go

```
6 import com.hpe.leanft.selenium.By;  
7 import com.hpe.leanft.selenium.ByEach;  
8
```

- Make life easier using utility-tools (object identification center)
- „old“ Selenium-Code is still working
 - TIP: Keep old code – integrate when maintaining or developing new

Discover the New ADM

Posted By **Jonathon Wright**, Wednesday, June 13, 2018

Updated: Wednesday, June 13, 2018

Last week, I attended the Micro Focus Open Horizon Summit in Berlin as the recently elected Vivit Board Director for Advocacy along with our Engagement Director Stephanie Konkoy.

After speaking with Jerome Labat – Chief Technology Officer (CTO) at Micro Focus at some lengths around the next generations products they have planned to go to market, I can confidently say that there is plenty to get excited about with the new Micro Focus.

"Discover the new Micro Focus" is something that we have heard continuously over the last 250+ days since September 1st when they became one of the worlds largest pure-play software companies but what does that actually mean for you?

Our unique platform and proven model for MANAGING a portfolio of software assets @ scale

Let us start with the 300+ products (including heritage Hewlett Packard Enterprise / Mercury / Open View product families) Micro Focus are now managing with over 4,800 software engineers across 30 locations to deal with this size and scale they have had to align the end to end process:

- Market Opportunity
- Product Offerings
- Enablement (Go To Market)
- Implementation Capabilities
- Tracking Performance

- Digital Experiences (DX)
- Internet of Everything (IoE)
- Human Augmentation
- Ambient Experiences
- Gesture Control
- Brain Computer Interface (BCI)
- Emotion Detection
- Head-Mounted Displays
- Virtual Worlds
- Context Brokering Platforms
- Digital Offers
- City Data Exchange
- Complex Event Processing
- Mass Personalization
- Connected Vehicle
- Autonomous Vehicles (C2X)
- Vehicles to Infrastructure (I2X)
- Mood Recognition

- Cognitive Reckoning
- Humanoid robots [Sophia First Robot Citizen]
- Vision / Sensors / Knowledge Replication
- Neuromorphic Hardware
- Digital Twins / Hyperconverged
- Cyber-physical systems
- Cryptocurrency Lawful hacking
- Cyber Threat Prediction / Zero-trust security
- Growth / Performance hacking
- Flexible displays / Screenless interface
- Smart Dust / Workspace / Robots
- Nanotube Electronics
- Accumulated reality
- Self-healing & aware systems
- Digital Out-of-Home (DOOH)
- End-to-end authentication
- Manufacturing
